ABSTRACT OF THE DISCLOSURE

- 15 A drive controlling ~~means~~^{unit} includes a final angle position memorizing ~~means~~^{device} for memorizing a final angle position at a time of termination of the vehicle driving operation, an input complete data memorizing ~~means~~^{device} capable of switching the memory content between a first memory condition and a second memory condition. The first memory condition indicates completeness of writing of the final angle position in the
- 20 final angle position memorizing ~~means~~^{device}. The second memory condition indicates failure in writing the final angle position therein. The input complete data memorizing ~~means~~^{device} is capable of maintaining the memory content even when the vehicle is stationary.
